DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear in claim 3 what the "2" designates.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Zighelboim (5,366,732). Regarding claim 1, Zighelboim discloses a method for milking animals, said method comprising the steps of sequentially stimulating the teats of the animal (col. 3, lines 1-5) to stimulate the udder; and milking the stimulated teats (col. 3, line 18).
3. Regarding claim 2 and the aforesaid discussion on claim 1, Zighelboim discloses the claimed method during which only single teats are being stimulated successively (col. 2, lines 10-20).

Art Unit: 3644

4. Regarding claim 3 and the aforesaid discussion on claim 2, Zighelboim discloses the claimed method during which a phase without any stimulation occurs (col. 3, lines 13-18). Note that washing and drying the teats is not interpreted as a stimulation.
5. Regarding claim 4 and the aforesaid discussion on claim 2, Zighelboim discloses the claimed method during which at the end of a stimulation phase of a teat a stimulation phase of another teat occurs (col. 3, lines 1-20).
6. Regarding claim 5 and the aforesaid discussion on claim 1, Zighelboim discloses the claimed method during which before the sequential stimulation of a single teat, the udder receives a pre-stimulation. Note that the pre-stimulation is interpreted as the washing and drying of the teats.
7. Regarding claims 6-8 and the aforesaid discussion on claim 5, Zighelboim discloses the claimed method during which the intensity of the sequential stimulation decreases both continuously and discontinuously during the milking procedure. Note that after the stimulation occurs, which is the antimicrobial wash, it is inherently understood that the stimulation decreases continuously after this wash since there is no further stimulation. If further treatment is provided to the cow, the intensity would decrease discontinuously.
8. Regarding claim 9 and the aforesaid discussion on claim 5, Zighelboim discloses the claimed method during which the milk flow is measured (col. 4, lines 1-36) and to change the intensity of the stimulation in accordance to the milk flow.
